Chelation Therapy

**Purpose:**

To provide Chelation therapy guidelines for Population Health and Provider Alliances associates to reference when making benefit determinations.

**Additional Information**

- Chelation therapy involves the use of a chelating agent (medications that are heavy metal antagonists) to bind with certain metals so that they are rendered physiologically inactive and excreted in the urine. Chelation therapy has been proven to be an effective treatment and is covered for specific medical diagnoses.

- Chelation therapy typically utilizes the following medications (this list is not to be considered all inclusive):

<table>
<thead>
<tr>
<th>Deferasirox</th>
<th>Deferoxamine Mesylate</th>
<th>Dexrazoxane</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dimercaprol</td>
<td>Edetate Calcium Disodium</td>
<td>Edetate Disodium (EDTA)</td>
</tr>
<tr>
<td>Penicillamine</td>
<td>Pentetate Calcium Trisodium (Ca-DTPA)</td>
<td>Pentetate Zinc Trisodium (Zn-DTPA)</td>
</tr>
<tr>
<td>Succimer (DMSA)</td>
<td>Trientine Hydrochloride</td>
<td></td>
</tr>
</tbody>
</table>

**Coverage Guidelines**

Chelation therapy is covered for the following diagnoses:

1. Cystinuria;
2. Heavy metal poisoning (arsenic, copper, gold, iron, lead, mercury) confirmed by appropriate laboratory results and/or clinical findings consistent with metal toxicity;
3. Wilson's disease (copper overload/toxicity);
4. Iron overload secondary to multiple blood transfusions or secondary Hemochromatosis;
5. Aluminum overload secondary to hemodialysis.
Chelation Therapy

Exclusion Criteria

Chelation therapy is not covered for the following diagnoses (this list is not to be considered all inclusive):

1. Atherosclerotic vascular disease;
2. Coronary artery disease;
3. Reperfusion injury during coronary angioplasty or cardiopulmonary bypass surgery;
4. Progressive renal insufficiency in Type II diabetic nephropathy;
5. Alzheimer’s disease;
6. Rheumatoid arthritis;
7. Parkinson’s disease;
8. Primary biliary cirrhosis;
9. Renal calculi;
10. Ankylosing spondylitis;
11. Autism / autism spectrum disorder;
12. Glioblastoma;
13. Scleroderma;
14. Porphyria;
15. Hypercholesterolemia.

**Disclaimer Information:**

Coverage Issues Guidelines and Medical Technology Assessment Recommendations are developed to determine coverage for AvMed’s benefits, and are published to provide a better understanding of the basis upon which coverage decisions are made. AvMed makes coverage decisions using these guidelines, along with the Member’s benefit document. The use of this guideline is neither a guarantee of payment nor a final prediction of how specific claim(s) will be adjudicated.

Coverage Issues Guidelines and Medical Technology Assessment Recommendations are developed for selected therapeutic or diagnostic services found to be safe, but proven effective in a limited, defined population of patients or clinical circumstances. They include concise clinical coverage criteria based on current literature review, consultation with practicing physicians in the AvMed service area who are medical experts in the particular field, FDA and other government agency policies, and standards adopted by national accreditation organizations.

Treating providers are solely responsible for the medical advice and treatment of Members. This guideline may be updated and therefore is subject to change.
